

# New Alzheimer's Drug Stirs Hope— Is a Cure in Hand?

**Big Pharma is touting this new drug as the next great thing...but our research indicates it is dangerous!**

**Presenting: An all natural remedy that is safe, inexpensive, and every bit as powerful!**

Dear Reader,

The drug industry calls it new...but it's not new at all...

In 1948, a group of scientists tested a primitive moss plant extract for the first time.

The results were astounding. Ever since, research on how this natural substance repairs memory has been quietly piling up...

And now, just when it is impossible to deny its effectiveness, Big Pharma has swept in to replicate it chemically while government forces work to keep the natural remedy from you.

It is a sickening fact but one that shouldn't surprise you. This isn't the first time the government has worked hand-in-hand with the major drug companies to replace natural, safe, and inexpensive remedies with chemical derivatives that are dangerous and expensive.

## But is the natural solution really effective?

Much of the general public has been duped to believe that drugs are almost always more effective than natural solutions. Despite countless studies that have proved the contrary.

In this case the effectiveness of this plant extract is undeniable. As one researcher put it:

*"It is as if this natural substance were ingeniously designed to fit into the exact spot in [the brain] where it will do the most good."*

In one study the extract was 348% MORE effective than the placebo. We're talking about doing the most good against that terrifying illness that has stumped doctors for decades.

Alzheimer's Disease.

The researchers declared the compound is a "safe and effective medicine, [it] remarkably improves the cognition, behavior, [activity of daily life], and mood of AD patients."

You heard that correctly. The scientist himself called it “safe and effective.” And it could benefit anyone that’s getting older and wants to shield their brain from aging.

As you’re about to see, you or a loved one can begin using this extract immediately to:

- Keep your mind sharp—never miss an appointment, or your grandchild’s big game.
- Prevent memory problems from getting worse—if you’re starting to have trouble remembering things that took no effort before.
- Help mood and behavior—ever snap at a loved one and immediately regret it? Yup. This can help with that too.
- Even to protect against Alzheimer’s—so you can keep your precious memories vivid for the rest of your life.

Sound too good to be true? If I hadn’t seen the research myself (the details of which I’ll share with you in just a moment), I’m not sure I’d even believe it. But the fact remains, this natural compound can help keep your brain young...

Without Big Pharma weaseling their way in. But unfortunately, they have enough money and power—and this extract is so good—that there’s no way they’ll leave it alone. We see it happen over and over again. The blood-thinner Coumadin? It’s a synthetic form of an ingredient in the sweet clover plant. The chemo drug Taxol comes from the Pacific yew tree.

My name is Angela Salerno. I’m president of The Institute for Natural Healing (INH). We uncovered clinical trials supported by top pharmaceutical companies. They are underway right now—or already completed—to test how this substance works as a drug against dementia, Alzheimer’s, even schizophrenia and brain injury.

These guys are working with the government to get it out of your hands...and into their own overstuffed pockets.

It’s not surprising. Big Pharma’s practices are often sketchy at best. More on that in a minute.

First, let me explain how this natural memory miracle works. And how you can start using it today...if you hurry.

## **The memory miracle you’ve never heard of.**

I’m confident you’ve never heard of this compound. That’s because as the president of INH, I have access to a large network of health professionals and researchers. And I myself would have never learned of it if it wasn’t for the work we do.

You see, we’re not interested in the bandwagon cures. The fads touted on every alternative health site or afternoon TV show.

We only care about real breakthroughs. Ones backed by strong studies and scientific evidence. And when we saw how this extract's benefits are documented, verified, and published by some of the top research facilities and medical journals in the world... And then when we found out how Big Pharma can't wait to get its dirty hands all over it...

Well, we really knew we had to spread the word.

## **So effective, it's "really more of a drug than an herb..."**

So what is it about this compound that has the suits drooling? It works just like the prescription AD drugs, but better. Let me explain...

We have a specific chemical in our brains that's critical for learning, memory, and other mental functions.

Alzheimer's patients' brains show a major drop in this chemical. That's why they gradually lose the ability to think, remember, even do the most basic tasks. So...keep the chemical, keep your mind. It's simple enough.

This extract fights to protect the amounts of the "memory chemical" left in the brain. The more you have and the longer it stays, the better your memory, awareness, and reasoning. It's like plugging a hole on a bucket full of the only water you have left to drink.

In that study I mentioned earlier, not only did the extract run circles around the placebo when it came to thinking ability...

But the activities of daily living—like eating, bathing, getting dressed—improved in a third of the patients too. Almost double the placebo patients.

Bear in mind, these results were in people who already had AD. Just imagine how you could boost your brain!

This natural compound actually works the same way Alzheimer's drugs like Exelon and Aricept do.

But even though it works the same way, it doesn't have the same results. It works better. Which makes it even more outrageous that it may soon be more difficult to access.

In fact, in one study done on Exelon looking at AD patients' overall function... there wasn't a real big difference between the drug and the placebo groups' results. And remember, in another study the extract worked almost four-and-a-half times better than the placebo!

No wonder the drug companies can't wait to get their hands on this natural extract. It blows everything they've come up with out of the water.

But instead of just admitting how well their tests on it are going...and getting the word out that there is already something on the market that works to slow down one of—if not the—most devastating, crippling diseases ever...

They want to bottle it up, boost the price a few hundred percent, and sell it to you themselves. It's not like they need the money. But all they see are dollar signs as results like these continue to roll in...

## Confirming what we already knew.

In a Chinese study, after two months, over half the patients treated with the extract showed increases in memory, cognitive, and behavioral functions. Just two months!

But that doesn't even paint the full picture of how it can really improve lives...

If you know someone with Alzheimer's, you know all too well that one of the first signs is when the person just stops being themselves. They get frustrated when they can't remember the name of a favorite book. They may even accuse loved ones of stealing something they've misplaced.

Sometimes they're just downright mean for no reason. And of course, it's not their fault. But even still... You miss the person they were. And you wonder if they'll ever come back to you.

**That's exactly the kind of hope this natural herb extract could offer. And that's exactly what Big Pharma threatens to take away from everyday people!**

In 2008, the National Institute on Aging conducted a controlled trial. They looked at 210 people with mild to moderate AD.

The ones taking the higher dose of this extract showed improved thinking, reasoning, intellect, awareness, and daily living.

You or a loved one can start using this natural extract today, to protect your memory. As you'll see in our latest free report **Nature's Memory Miracle: Saving Your Brain from Alzheimer's**, you can get your hands on this extract for pennies a day!

But fair warning...It might not stay that way for long...

## The FDA knows a money-maker when it sees it.

If the FDA approves this as a new drug for AD, Big Pharma will tell you their version is the only version...and try to sell it to you for hundreds of dollars.

And yes, you'd probably pay that (if you can afford it) because money is nothing when it comes to preserving your memories and mind.

Alzheimer's is expensive.

AD drugs on the market now can cost upwards of \$200 or more for a 30-day supply.

Yet you can get this extract now for less than \$20. And scientists admit it's not only safer than those other drugs...it works as well, if not better!

But heaven knows what kind of side effects it may have once Big Pharma starts tinkering with it.

Prescription AD drugs on the market now can cause things like seizure, coughing up blood, chronic fatigue, depression, chest pain, sleep problems, pain, and more. But based on all of the studies we've seen, the plant extract has no serious side effects.

In the last few years, over 100,000 people in Asia have been treated with it. And there's no reason to wait to try it for yourself. Especially when you can get it now for just a few cents a day.

Let's face it. Our minds, our memories, these are the things that make us—well—us. So it's terrifying to think that someday we might not remember the names of our kids and grandkids...where we live...how to do simple tasks...

This natural herb extract is a potential life saver.

You will get all the details on it and how it works in **Nature's Memory Miracle: Saving Your Brain from Alzheimer's**. And you'll get it just minutes from now via e-mail, free with this offer.

Get all the knowledge for yourself right away...before Big Pharma tries to force you to take their version instead.

Because when they do turn this extract into a pill...you won't believe what else they'll try to sneak into it...

## **Painting over their pills—and the truth—with toxins**

There's a widely recognized neurotoxin that obstructs more than 200 important functions in the body.

It's known to cause bone disease, anemia, and kidney problems. It's linked to Alzheimer's and other memory problems...

And if you took a prescription medication this morning, you probably ingested it.

That's right...the drug companies are slowly poisoning you with aluminum.

Almost every prescription pill—tablets, capsules, even children's meds—is colored with what's called an "aluminum lake." That's aluminum oxide mixed with coloring matter.

**When you ingest aluminum, it crosses the blood-brain barrier and slowly builds up in the brain.**

The "Aluminum Hypothesis"—that it's a contributor to the progression of AD—was first proposed in the 1960s.

And here we are in 2013, swallowing aluminum every day because Big Pharma says it's safe. The FDA somehow agrees (are we really surprised?). So it's added it to vaccines. It's in antacids and antiperspirants.

It's bad enough that Alzheimer's can occur naturally. We certainly don't need anything to help it along.

All the more reason to stock up on the plant extract—detailed in **Nature's Memory Miracle: Saving Your Brain from Alzheimer's**—now, before Big Pharma can tamper with it.

Of course it's almost impossible to avoid all of the dangerous toxins lurking in today's products.

But as you'll see in our other new report, **Clean Living: Simple Ways to Stay Healthy in an Unhealthy World**, there are simple tricks to protect yourself from many of them. And a little goes a long way in keeping the toxins out.

## Your skin soaks up what you put on it.

Your shampoo, deodorant, lotion, after-shave, soap, makeup...

Count up how many of these products you'll use today. Then add up the ingredients in each one—most of which you can't pronounce—and you'll get an idea. Like:

- The chemical used in firefighting materials...linked to breast and prostate cancer, eye, skin, and respiratory irritations...that's probably in the shampoo you used this morning.
- The EPA calls it a "probable human carcinogen" ...it's been banned many places outside the U.S...but still used in cosmetics and even baby products in the U.S.
- What you'll find in most things that have "suds"—soap, toothpaste, shampoo...it throws hormones off-balance and can actually mutate cells and lead to the breakdown of skin.

In this in-depth report, we lay out the truth on each of these chemicals and more, including the dozens of names they hide behind on ingredient labels.

It's time to face the facts. Big Pharma does not have your back. And neither does the FDA. You need to take control of your own health.

One of the best places to start? Avoid putting toxins both on your body and in it...

## You are what you eat.

Of course the most effective way to avoid chemicals is to be aware of the food you eat.

In **Clean Living**, you'll also discover...

- Simple tricks to eat clean even if you can't afford weekly trips to Whole Foods. For example, we give you a list of 15 fruits and vegetables that are safe to eat even if you pick them up from the regular produce aisle. (We also reveal the 12 fruits and vegetables that have the highest residues of chemicals when conventionally grown.)
- That the biggest genetically-modified crops that are the foundation of many common packaged foods. We'll tell you the top three.
- What to look for on produce at your grocery store that tells you it's safe. And what not to believe on a label.
- And much more.

## Again, I'd like to send this report to you absolutely free.

The mainstream media simply can't cover the latest stories like new natural cures and Big Pharma's blunders as thoroughly and unbiased as we do at INH. They would lose hundreds of millions of dollars in pharmaceutical advertising every year. They just aren't willing to part with that kind of money.

Case in point: cancer treatments.

I'm not trying to frighten you...

But the truth is that right now—as you sit there—you could have dangerous cancer cells hiding in your body. If not you, then perhaps someone you care about.

Traditional tests can easily miss it. And you may not have any symptoms...yet. But if left untreated, the consequences could be deadly.

So, then, why would a test that can detect this “invisible cancer” be stifled by the mainstream? Especially since the research behind it is published in respected medical journals, including *The Lancet* and *Cancer Detection and Prevention*?

Even though Harvard-trained doctor and neurochemist invented and perfected this test... Over 20 years of research supports it... **The FDA even approved it...** And it's covered by Medicare?

If you're starting to see a trend here, you're right. Big Pharma is always skulking behind the scenes.

I'm talking about a simple blood test that discovers cancer cells up to 19 months before conventional screening tests. A test with a first-time accuracy rate of 95%. Take it twice and that rate jumps to **99%**.

That's worth repeating. A simple blood test that can detect cancer 19 months earlier than other tests. **With up to 99% accuracy.**

It could very well be the biggest breakthrough in cancer research in over 30 years. The way I see it, it would be downright irresponsible not to let people know that such a life-preserving measure exists.

Because too many people are discovering cancer in their bodies too late.

In one survey done by the Centers for Disease Control and Prevention, they found that over 360,000 people were diagnosed with late-stage cancer in the span of a year. That means all of those people had cancer cells multiplying in their bodies and didn't know it. They showed little to no symptoms. Yet they were getting sicker and sicker on the inside.

The CDC states that many of these cases were “diagnosed at a regional or distant stage, when treatment is not as effective and survival is worse compared with cancers diagnosed at a localized stage.”

One type of late-stage cancer in particular has a five-year survival rate of just 11%. Yet if found early enough, that number skyrockets to 91%!

That's why we're blowing the lid off this incredible test when no one else is. And giving you all the background you need so you can go to your doctor and get it tomorrow, if you like.

And—knock-on-wood—you'll even find out what to do if the test comes back positive.

## **Naturally wipe out the cancer—without surgery, without chemo, without radiation.**

The only reason you'd want to know you have cancer early is so you have the best chance of curing it with as little effort as possible.

In our report, ***Cancer Uncovered: How to Discover and Cure Cancer 19 Months Before Your Doctor Knows You're Sick***, you'll find Angel's story. Angel used this test to discover she had cancer, long before any other test would have showed it. Because of that, she was able to use natural supplements to defeat her early-stage cancer.

She got in touch with a laboratory that specializes in telling you which alternative, integrative, and conventional therapies your particular cancer is most responsive to. We'll even tell you which lab it was.

If you're diagnosed with a more advanced cancer, this lab can run "chemo sensitivity" tests which help make sure you're not being given types of chemotherapy that don't work well with your particular cancer. The lab also offers tests they say can show which natural supplements may enhance chemo's effectiveness.

Some types of cancer may respond better to chemo when used with the antioxidant quercetin. Some types are especially responsive to the compound curcumin. And other types of cancer cells are particularly susceptible to the herb graviola.

All of these supplements are all natural and available online or in a local store. Though it's probably only a matter of time before Big Pharma commandeers these too.

**Using this lab's tests, it may be possible to beat cancer with natural supplements and immune boosters if you catch it early.**

Which brings us to the question...

## **Why aren't all doctors using this test?**

Unfortunately, there's no satisfying answer.

These are significant, scientific innovations. Yet virtually no doctors know about them. Who does, besides researchers and the FDA?

Big Pharma.

Aha. Now it starts to make sense.

Cancer is a profitable business! Every year it costs its victims \$124 billion. By 2020, that number is projected to jump as high as \$207 billion.

Imagine how much money drug companies would lose if everyone over 50 took this cancer test. If just a fraction of the over one-million people diagnosed each year caught it early enough to destroy their cancer cells with natural, safe, and inexpensive supplements.

And imagine if people with more advanced cancers were able to drastically reduce their chemotherapy.

How many billions of dollars would the cancer industry lose?

Pharmaceutical companies are some of the biggest lobbyists in Congress... They're among the largest advertisers in the mainstream media... And they're responsible for funding the "ongoing education" of conventional doctors.

Now I ask you...why do you think this cancer screen has been kept from doctors?

At the end of the day, what really matters is this: What are you going to do to protect yourself and your loved ones?

I'd like to send you our report on this cancer breakthrough so you can examine it for yourself. In this report, you'll discover:

- How the test finds cancer cells in the body (it looks for a type of protein cancer patients usually have a lot of)...and how you can get your doctor to give it to you.
- Whether you fall into one of the "high risk" groups that should consider this test as quickly as possible (like people who work in certain industries)... plus who this test is not for.
- The steps to consider taking if your test comes back positive. You may want to follow it up with a molecular detection test.

As far as I know, nobody has ever published a report on this therapy for consumers. By getting it directly into your hands (and bypassing the laborious, sometimes "mysterious" FDA-regulations) we can make sure that this new therapy will no longer languish in the dark.

This is exactly the type of discovery that makes all of our work and research at The Institute for Natural Healing worth it.

I'll e-mail you:

- Cancer Uncovered: How to Discover and Cure Cancer 19 Months Before Your Doctor Knows You're Sick
- Clean Living: Simple Ways to Stay Healthy in an Unhealthy World
- Nature's Memory Miracle: Saving Your Brain from Alzheimer's

As e-books, right now, for free.

---

All I ask in return is that you try a subscription to our monthly newsletter, Natural Health Dossier.

Like I mentioned before, we're unique in that we're only interested in a natural cure or remedy if it's backed by real studies and scientific evidence.

And our readers notice. Like Lawrence T, who told us:

*As a healthcare practitioner specializing in natural medicine, I get a number of natural health newsletters ... I have to tell you that NHD has become my most favorite newsletter ... I find stories in NHD that I am unable to find anywhere else, and they are all well researched with references.*

Or Manon T. who wrote:

*You are people who make a difference in our life. You give us the background of your work, how it has started and your discoveries as you go. Your articles and the references are absolutely fantastic and worthy of credibility. Your knowledge, experience, and passion ... for people brought us to trust you. When it is coming from your team we know it's worth it.*

And Floyd S. who said:

*You go directly to the heart of the matter with essential details. I do not have to waste time to get my answer. You also cover the best treatments.*

We've just seen too many so-called "health gurus" out there jumping on every natural health "breakthrough"—with nothing to back it up except for their own word or hearsay.

That's not us. We don't care how popular the latest fad is...or whether or not a new therapy fits a preconceived theory about medicine.

But if we can find real evidence that it works, we bring its complete details to our members. And they've told us about their great results.

Rod said:

*Love the publication and the constant stream of helpful information ([I] put one suggestion to use and it has made a BIG—and positive—change to my health).*

David said:

*I have used your articles to help me withdraw, over a sensible period of time, from harmful medication for asthma and high blood pressure.*

And Michele who said:

*I began taking L-Arginine for my blood pressure after seeing it in NHD. I was able to discontinue one of my blood pressure meds. [This has] made such a big difference in my life and for that I want to say thank you.*

Because we're outside the influence of the medical establishment, no one can control what we tell you. We're free to bring you the real facts.

When you join our 23,000-plus community of health-conscious members, you'll have all the details on breakthrough cures like the ones I've just told you about, and you'll discover where they're available right away.

Just click the button at the bottom of this page and you can access your free reports in just minutes.

And of course, as a member of Natural Health Dossier you're going to get much more than just these reports.

You'll also get a new, detailed newsletter issue every month, and access to all of our archives.

Some of our recent ones:

- Your first line of defense against every modern illness: cancer, heart disease, diabetes, depression, obesity, and more.
- The sugar balance strategy that could save your life (whether or not you have diabetes).
- The 90-minute key behind better health, lower stress, and superior performance.
- Three proven ways to survive cancer (and chemotherapy).  
The DNA secret to immortality: how to switch on your internal "fountain of youth" to add healthy years to your life.
- Beyond the bedroom—the real dangers of low testosterone: and the all-natural "T-boost" to keep you looking and feeling years younger.

In our archives and library of special reports, you'll also discover hidden health secrets like:

- One simple vitamin that could cut the risk of heart disease by 40%.
- The plant substance that could reduce liver tumors by up to 64% that you can easily incorporate into your diet.
- Simple weight loss tricks you can do every day—without the expensive gimmicks, extreme diets, or hours of exercise.

If you're like most of our members, you do everything in your power to stay ahead of your health. You may spend hours scouring health forums online. Or you may subscribe to three or more free health e-letters.

Since you've followed along this far, you're already more aware of advanced and effective cures than many working doctors.

Pretty soon your friends and family will be coming to you for health advice more than their own physicians!

Like Patty K. who told us:

*I find all the articles in your newsletter of value. It is an excellent resource that I enjoy reading and I share its contents with many other folks who are not so blessed as to get this information.*

As each monthly issue comes out...and with each urgent bonus report...the library grows. One you'll refer to again and again as health issues pop up in your family.

The most recent health breakthroughs, with actual scientific results, are only available in medical journals. Subscriptions to these journals cost hundreds of dollars a year.

Most of that research is funded by tax dollars. So we basically pay for the research, then we're charged hundreds of dollars to discover the results!

That's not only ridiculous, it's just plain unfair.

And it's why we decided to make this service as affordable as possible. We find the best cures, validate the findings, and deliver only the most relevant information to you. All at a price that doesn't hurt your budget.

The cost of time and research that goes into Natural Health Dossier is substantial. As a privately-circulated report, it would probably sell for \$400 or \$500 a year. But since we wanted to make it affordable for anyone...

We settled on \$79 a year—just over \$6.50 a month. That covers your in-depth monthly issue, our complete archive of past issues, website access with a private password, an online library of special reports, and other reports and urgent whitepapers that we often send members.

But right now we are in a membership drive. So you can subscribe today for half price. It's only \$39 for a full year's subscription.

## **That works out to a penny a day!**

And as soon as you hit "order" I'll e-mail you the three free reports I told you about today. In just minutes you'll discover:

- Nature's memory miracle that works better—and safer—than pharmaceutical drugs in slowing down (maybe even reversing) Alzheimer's and memory problems.
- Dozens of simple ways to stay healthy in an unclean world. From the food you buy to the toiletries you use each day.
- The test that detects "invisible cancer" up to 19 months before other tests. And what to do if yours comes back positive.

You've only seen a small sample of what you're getting when you join us. You will never get a chance to do so much for your health for just a penny a day.

Don't take my word for it. Our member Andrew F. told us...

*All [NHD] articles are a brilliant reference guide and it is good that you provide info on all the new finds or discoveries in the medical field along with actual contacts/addresses/names of those involved.*

*There are many other organizations that send out e-mails galore that try and mimic what you do, but they fail to name the substances used for bringing about the benefits to one's health or the contact names etc...or only if you pay through the nose just to be given that info. Your organization is truthful and genuine and the best value for money I've ever come across.*

And along with these benefits, there is never any risk to you. **If you ever think we're letting you down, let us know and we'll quickly refund your full subscription fee. Even up to the last day of your membership term.**

We want to prove to you every month that you've made the right decision. If we can't live up to our promise, we don't deserve your money.

So join now and get instant access to the complete details on all these natural solutions. Take the steps to help prevent Alzheimer's, cancer, and the health problems caused by toxins in our environment.

Click the button below to claim all your membership benefits now. And set yourself up to receive uncensored knowledge on new medical cures every month.

In Good Health,

Angela Salerno
